CUSTOM CABINETRY CARE:

STAINED CABINETRY - SHEEN 50 (Glossy)

Clean the cabinetry as needed with a lint-free cloth (micro fiber) and soapy water and dry thoroughly and immediately.

DO NOT USE SUCH PRODUCTS AS “Old English”, “Pledge”, “Endust,” or any wax products. The wax used in these products has a chemical reaction to the finish on the cabinetry, making it impossible to repair or touch up.

STAINED CABINETRY - SHEEN 20 & 5 (Matt to Dull)

Clean the cabinetry as needed with a lint-free cloth (micro fiber) and soapy water and dry thoroughly and immediately.

If further cleaning is necessary, use ¼ cup vinegar to one (1) gallon of water with a lint-free cloth. Repeat cleaning with clean water and a lint free cloth. Dry thoroughly and immediately.

DO NOT use Citrus Shine on these specialty finish cabinets.

DO NOT use “FLAXSOAP®”, MURPHY’S OIL SOAP®” OR CABINET MAGIC®, or Citrus Shine on 5 or 20 Sheen finishes. These and other products will shine the appearance of the dull (hand) rub surfaces, resulting in sheen on the cabinetry instead of the dull appearance.

DO NOT USE SUCH PRODUCTS AS “Old English”, “Pledge”, “Endust,” or any wax products. The wax used in these products has a chemical reaction to the finish on the cabinetry, making it impossible to repair or touch up.

PAINTED CABINETRY

Clean the cabinetry as needed with a lint-free damp cloth (micro fiber) and dry thoroughly and immediately. At least once a year you should use soapy water and thoroughly clean all cabinets, paying special attention to cracks and crevasses where dirt and grime can build up. Around stove or where grease and oil build up add a squirt of dish soap and a splash of vinegar (1/4 cup per gallon of water) to help break through the tough stuff. Finally wash with clean water and towel dry.

DO NOT use ammonia based cleaners, as these products will soften the finish.

General Cabinetry Cleaning Notes

Make sure to wipe dry any spills, splashes, or drips as they occur, always keep the surface of your cabinetry dry. Wood is like a sponge. It can absorb moisture or dry out. It is important to control the humidity in your home at a consistent 38% to 48% year round to maintain the best environment for your cabinetry.

DO NOT use any abrasive towels, rags, or powdered cleaners as these may scratch or penetrate the surface, thus allowing moisture to penetrate and deteriorate the finish.

DO NOT use a dishcloth to clean or dry cabinet exteriors. It may contain remnants of detergents and grease.

DO USE Mirco fiber towels to clean and dry your cabinetry.

DO NOT use harsh detergents, strong soap, abrasive cleaners, or self-polishing waxes. All of these items can remove the cabinets’ factory-applied finish.
